Branded to Client Specifications

Essential Mobile Capabilities

According to IDC, of the 3.2 billion people with access to the Internet, more than 2 billion used their mobile devices to access it in 2016. Furthermore, in the United States alone, the number of mobile payments is expected to double in the next five years.

The Velocity Payment System offers payment and billing solutions that allow organizations to accommodate the needs of these platform agnostic mobile customers in their natural online environments.

Full Suite of Mobile-Enabled Products

Velocity's mobile-enabled solutions include several modules and configurations including Basic Web Payments, Integrated Web Payments and Basic Bill Presentment. Convenience fee and non-convenience fee models are also accommodated. Merchants can brand the look and feel of mobile-enabled pages and utilize custom images, logos, background colors and messaging.

Easy to Use

Velocity's mobile interfaces are optimized for viewing, navigation and entry. Velocity detects the payer's use of a mobile device and automatically optimizes the display to make it easy for the customer to find a service, lookup a bill, make a payment and view a receipt. Customers do not need to perform horizontal scrolling. Button sizes, checkboxes, drop lists and payment entry screens are designed for their mobile and touch screen devices.
