## MEDICAL PRACTICES

### Patient Payments

- Point of Service Payments
- Phone Payments
- Web Payments
- Self-Service Payments
- Recurring Payments & Payment Plans
- Electronic Bill Presentment
- Equipment & Equipment Leasing

### Expanded Patient Payment Options

Velocity enables medical practices to streamline the entire revenue cycle by expanding payment options for patients. The results include faster payment processing, a reduction in delinquent accounts and a decline in uncompensated care. Velocity combines traditional credit card processing with 24-hour, self-service payment options, phone payments and automatic recurring payment plans.

Velocity allows medical practices to collect payments beyond office hours using convenient, self-service payment facilities and streamlines payments collected in the office. Velocity reduces transaction costs while lowering administrative costs and hassles.

### 24-hour Account Payment Access

Velocity's account profile management system provides medical practices with patient payment profiles, payment preferences and payment history. Administrators can establish payment plans for patients with large balances or delinquent accounts. Payment plans are also ideal for practices providing financing for specialty services not covered by insurance. These features offer healthcare providers and administrators a broader range of payment tools that result in improved payment processing and revenue cycle management. Efficient handling of co-pay and post-adjudication payments is essential to the modern medical practice.

### Benefits

- Streamlined Receivables Management
- Lower Transaction and Operating Cost
- Expanded Payment Options
- Payment Plan Administration
- Delinquent Account Management
- Accounting Interface
- HIPAA, PCI, SSAE 16 Compliance
- Offer 24-Hour Account Access

### Turn-key Service

Velocity provides turnkey services that include terminals, equipment leasing, transaction processing, implementation, training and 24/7 support. Velocity is the technology needed to meet the challenging demands faced by today's medical practices.
